

# Cancer Prevention Education

Client: Desiree Jones  
Alex Salce, Huashi Li (Taryn Laird)  
September 26, 2004

## **Aim:**

Educate community members on:

Cancer development and risk factors.

Healthy habits to prevent cancer.

The importance of cancer screening and early detection.

## **Target Audience:**

Tribal communities.

## **Method:**

Five presentations delivered to Tribal communities on: Women's Cancers, Men's Cancers, Colorectal Cancer, Lung Cancer, and Skin Cancer & Sun Safety.

Paper evaluations were collected immediately following each session.

# Participant Data and Evaluation Overview

**Total Questionnaires Collected:** 76

**Women's Cancers:** 12 participants

**Men's Cancers:** 18 participants

**Colorectal Cancer:** 6-8 participants

**Lung Cancer:** 31 participants

**Skin Cancer:** 12 participants

**Note:** Some participants attended multiple sessions.

The same group attended the Women's Cancers and Skin Cancer sessions.

Some overlap between participants in Men's Cancers and Lung Cancer.

## **Sample Questions from Evaluations:**

**Demographic Information:** Age, sex, gender identity, race.

**Cancer Screening:** Have you ever had a mammogram or Pap smear?

**Knowledge & Awareness:** I know more about women's cancers than I did before today (rated from Strongly Disagree to Strongly Agree).

## Key Questions and Analysis

### Key Questions:

1. How effective was this educational presentation?
2. Were participants more likely to pursue follow-up if they were engaged in the screening process?
3. Are there any recommended analyses?

Limited experience with R and Excel; Excel may be more convenient for analysis.
